

Back end programming

What is back end development?

- It is what saves and manages your data.
- Example: to buy something online we have to send messages over the internet To the online shop. But we can't send messages on our computer by default we Have to program them to be able to receive those messages and that is what we call back end programming.

What is flask?

- It is a framework for python that is designed to make building web applications Simple.
- It provides the bare essential needed to handle HTTP requests but still remaining flexible enough for developers to choose.

What is an API?

- It is the list of all the different types of requests that the backend allow is called the API (Application Programming Interface.)

How does an API work?

- It acts as the bridge between a user's applications and a server.
- Our applications review the API documentation or available endpoints and sends an API request to the API. the API server receives this request processes the instructions, fetches or prepares the data and completes the requested action. The API sends the finished product to the customer.

How do server and client communicate?

- They communicate through a set of protocols.

HTTP Methods (GET, POST, PUT, DELETE)

- GET: simple requests for information.
Should only receive data.
Should not result in modification of data.
- POST: they are meant to modify the underlying data.
They are used to create new resources.
- PUT: they update an existing resource or data.
- DELETE: remove existing resources.

Back end programming

What is JSON?

- It stands for Java Script Object Notation.
- It is used for storing and transmitting data between a web server and a client .
- Also used for storing user submission forms.
- As well as validating email addresses.
- It is the standard format for data exchange.
- Advantage: beginner friendly
 - Light weight
 - Compact
 - Self-describing

Routing in flask

- in flask routing is the process of mapping a specific URL path to a specific python function in an application.
